OLD DOMINION UNIVERSITY®

School of Cybersecurity

October 29, 2026

Dear Members of the Selection Committee:

I am pleased to recommend Briannah M. Greene for scholarship and fellowship programs that prepare emerging professionals for cybersecurity and public service. I taught Briannah in CYSE 201S: Cybersecurity and the Social Sciences at Old Dominion University during Fall 2026. The course asks students to look beyond technical controls and consider how human judgment, organizational incentives, and social conditions shape security outcomes. Briannah engaged seriously with that challenge.

In her written work, Briannah connected major cybersecurity incidents with concepts from psychology and the social sciences, including present bias, risk perception, and misaligned incentives. Her analysis showed an understanding that preventing security failures requires attention not only to systems, but also to the people operating them. I particularly valued her willingness to improve: as the term progressed, her responses drew more deliberately on course readings and made clearer, better-supported arguments. She earned an A- in my course. Her transcript also reflects a 3.94 GPA at ODU and excellent performance in other cybersecurity coursework, including Generative AI in Cybersecurity.

Briannah's initiative extends beyond the classroom. According to her résumé, she was selected for the COVA CCI Undergraduate Cybersecurity Research Program, where she is investigating 'oversight drift'—the possibility that meaningful human supervision weakens as AI-assisted workflows become more autonomous. She has also led a CyberPatriot team and worked as a lead web developer and UX designer on a community-focused housing-accessibility prototype. These experiences complement what I saw in class: a student who considers both the technical design of a solution and the people it is intended to serve.

Briannah brings academic discipline, developing research capability, and a clear interest in federal cybersecurity service, particularly digital forensics. I believe she will contribute thoughtfully to a rigorous program and make good use of the opportunities it provides. I recommend her with confidence and would be pleased to provide further information if helpful.

Sincerely,

Farahnaz Hosseini, Ph.D.
Teaching Assistant Professor of Cybersecurity
School of Cybersecurity, Old Dominion University
